

# Gender Equality Index 2020 GREECE

## Progress on gender equality in Greece since 2010

With 52.2 out of 100 points, Greece ranks last in the EU on the Gender Equality Index. Greece's score is 15.7 points below the EU's score.

Since 2010, its score has increased by 3.6 points, with a slight increase of 1.0 point since 2017. Its ranking has remained the same since 2010.

## Best performance

Greece's scores are highest in the domains of health (84.0 points) and money (72.5 points). In each of these domains, Greece has one of the lowest scores among all countries (ranking 21st and 22nd, respectively).

## Most room for improvement

Gender inequalities are most pronounced in the domains of power (27.0 points), time (44.7 points) and work (64.4 points). In these domains, Greece performs poorly in comparison with other Member States (ranking 27th in all three).

## Biggest improvement

Since 2010, Greece's scores have improved the most in the domains of time (+ 9.1 points) and power (+ 4.7 points). Greece has gained 2.7 points in the domain of power since 2017.

## A step backwards

Since 2010, Greece's scores have decreased in the domains of money (- 2.8 points) and health (- 0.3 points). Progress has stalled in the domain of work (+ 0.8 points).

The most recent reference period for data used in the 2020 Index is January 2020. The EU aggregate refers to the EU-28 and includes the United Kingdom because during the reference period the United Kingdom was a Member State.

## **About the Index**

Each year, we score the EU Member States and the EU as a whole to see how far they are from reaching gender equality. The Index uses a scale of 1 to 100, where 1 is for total inequality and 100 is for total equality.

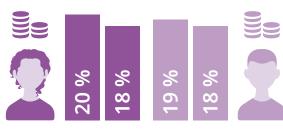

The scores are based on the gaps between women and men and levels of achievement in six core domains – work, money, knowledge, time, power and health – and **their subdomains. Two additional domains** are included in the Index but do not have an impact on the final score. The domain of intersecting inequalities highlights how gender inequalities manifest in combination with age, (dis)ability, country of birth, education and family type. The domain of violence against women measures and analyses women's experiences of violence. The Index is composed of **31 indicators**. The Gender Equality Index 2020 also includes **a thematic focus on digitalisation and the future of work**.

### **Key highlights**

## Economic situation improved for both women and men

The risk of poverty has slightly decreased for both women and men.

2010 2018 2010 2018

2010

6 % 12 %

2010

2020

17 %

## Improvement in gender balance in economic decision-making

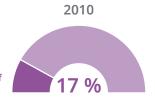

The shares of women on the boards of the largest publicly listed companies and on the board of the central bank have increased.

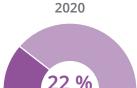

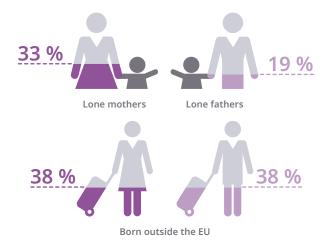

## Moving slowly towards gender balance in parliament

The share of women members of parliament has increased.

#### Inequality in economic situation

The people facing the highest risk of poverty are lone mothers and fathers and women and men born outside the EU.

## Employment has decreased for both women and men

The full-time equivalent (FTE) employment rate has decreased for both women and men.

## Gender gap in employment remains high, especially among some groups

Between women and men in couples with children, the gap in the FTE employment rate is six times bigger than in couples without children.

### Why is there no score for the violence domain?

There is no new data to update the score for violence, which is why no figure is given. Eurostat is currently coordinating an EU-wide survey on gender-based violence, with results expected in 2023. EIGE will launch a second round of administrative data collection on intimate partner violence, rape and femicide in 2022. Both data sources will be used to update the domain of violence in the Gender Equality Index 2024.

Unlike the other domains of the Index, the domain of violence does not measure differences between women's and men's situations; rather, it examines women's experiences of violence (prevalence, severity and disclosure). The overall objective is not to reduce the gaps in violence between women and men, but to eradicate violence completely.

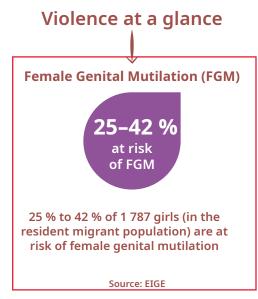

Data gaps mask the true scale of violence.

The EU needs comprehensive, up-to-date and comparable data to develop effective policies that combat violence against women.

7 women killed by their partner No data is available on women victims of intentional homicide by a family member

Source: Eurostat

Source: Eurofound, European Quality of Life Survey

During the COVID-19 lockdowns, women in violent relationships were stuck at home and exposed to their abuser for long periods of time, putting them at greater risk of domestic violence. Even without a pandemic, women face the greatest danger from people they know.

### **Istanbul Convention: state of play**

The Istanbul Convention is the most comprehensive international human rights treaty on violence against women and domestic violence. Greece signed the Istanbul Convention in May 2011 and ratified it in June 2018. The treaty entered into force in October 2018.

### Thematic focus on digitalisation and the future of work

The Gender Equality Index 2020 focuses on digitalisation and the future of work. The thematic focus looks at three areas:

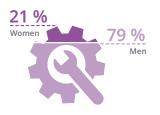

- · use and development of digital skills and technologies;
- digital transformation of the world of work (segregation, working conditions, work-life balance);
- broader consequences of digitalisation for human rights, violence against women, and caring activities.

#### Above basic digital skills among people aged 25–29 years

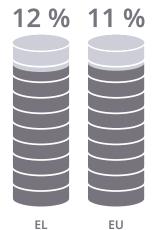

#### Scientists and engineers in high-technology sectors

#### Gender pay gap in ICT

Aain indicators		ece	EU

Gender pay gap in ICT 12 11 (%, 2014)

Eurofound (European Working Conditions Survey) s: Eurostat estimate

Some areas of concern (e.g. platform work and artificial intelligence) are not covered by the indicators owing to a lack of EU-wide comparable data.
